Contents

Preface	vii
Acknowledgements	ix
The IPA chart	x
1. Structures in languages	1
2. The production of speech	15
3. Some typology: sameness and difference	34
4. Making the form fit	45
5. Underlying and surface representations	61
6. Distinctive features	72
7. <i>SPE</i> . A case study: the diminutive suffix in Dutch	92
8. Transparency and opacity with rules and constraints	111
9. Levels of representation	131
10. Representing tone	147
11. Between the segment and the syllable	162
12. Feature geometry	185
13. Exploiting the feature tree	198
14. Stress and feet	214
15. Further constraining stress	227
16. Phonology above the word	246
Epilogue	262
Key to questions	264
References	300
Language index	311
Subject index	316

Understanding Phonology third edition

'This is an excellent book. Clear, concise and explicit about problem areas. The exercises are very good and extremely useful.'

John Goldsmith, Professor of Linguistics, University of Chicago

There are approximately 7000 languages worldwide, but no two languages have the same sound structure despite all showing striking similarities in their sound systems. Phonology tries to understand the structure behind these systems and to answer many of the questions posed by language.

Understanding Phonology, Third Edition, provides you with a broad and up-to-date introduction to phonology. It introduces the basic concepts, illustrates key points from a wide variety of languages, and provides a comprehensive account of phonological representations, including: segmental contrasts; syllables and moras; tone, quality, intonation; feature geometry; word stress systems and prosodic structure.

Key features of this third edition include:

- over 140 exercises to test understanding, with an answer key
- a chapter on rule interaction and the treatment of opacity in Optimality Theory
- an additional section on the wider scientific context of phonological research
- new material on language change
- discussion of the acoustic properties of sound.

Carlos Gussenhoven is Professor of General and Experimental Phonology, Radboud University Nijmegen and Professor of Linguistics, Queen Mary University of London.

Haike Jacobs is Professor of French Language and Literature, Radboud University Nijmegen.

Series editors: Bernard Comrie, Max Planck Institute for Evolutionary Anthropology, Leipzig, and Greville Corbett, University of Surrey

This series provides approachable, yet authoritative, introductions to major topics in linguistics. Ideal for students with little or no prior knowledge of linguistics, each book carefully explains the basics, emphasising understanding of the essential notions rather than arguing for a particular theoretical position.
