Foreword	xiii
Preface	xv
<b>1 Why Periodic Structures Cannot Synthesize Negative Indices of Refraction</b>	<b>1</b>
1.1 Introduction	1
1.1.1 Overview	1
1.1.2 Background	2
1.2 Current Assumptions Regarding Veselago's Medium	2
1.2.1 Negative Index of Refraction	2
1.2.2 Phase Advance when $n_1 < 0$	3
1.2.3 Evanescent Waves Grow with Distance for $n_1 < 0$	3
1.2.4 The Field and Phase Vectors Form a Left-Handed Triplet for $n_1 < 0$	3
1.3 Fantastic Designs Could Be Realized if Veselago's Material Existed	5
1.4 How Veselago's Medium Is Envisioned To Be Synthesized Using Periodic Structures	6
1.5 How Does a Periodic Structure Refract?	9
1.5.1 Infinite Arrays	9
1.5.2 What About Finite Arrays?	15
1.6 On the Field Surrounding an Infinite Periodic Structure of Arbitrary Wire Elements Located in One or More Arrays	16
1.6.1 Single Array of Elements with One Segment	16
1.6.2 Single Array of Elements with Two Segments	18
1.6.3 Single Array of Elements with an Arbitrary Number of Segments	19
1.6.4 On Grating Lobes and Backward-Traveling Waves	20
1.6.5 Two Arrays of Elements with an Arbitrary Number of Segments	21

- 1.6.6 Can Arrays of Wires Ever Change the Direction of the Incident Field? 23
- 1.7 On Increasing Evanescent Waves: A Fatal Misconception 23
- 1.8 Preliminary Conclusion: Synthesizing Veselago's Medium by a Periodic Structure Is Not Feasible 24
- 1.9 On Transmission-Line Dispersion: Backward-Traveling Waves 26
  - 1.9.1 Transmission Lines 26
  - 1.9.2 Periodic Structures 30
- 1.10 Regarding Veselago's Conclusion: Are There Deficiencies? 32
  - 1.10.1 Background 32
  - 1.10.2 Veselago's Argument for a Negative Index of Refraction 32
  - 1.10.3 Veselago's Flat Lens: Is It Really Realistic? 34
- 1.11 Conclusions 35
- 1.12 Common Misconceptions 38
  - 1.12.1 Artificial Dielectrics: Do They Really Refract? 38
  - 1.12.2 Real Dielectrics: How Do They Refract? 40
  - 1.12.3 On the  $E$ - and  $H$ -Fields 41
  - 1.12.4 On Concentric Split-Ring Resonators 42
  - 1.12.5 What Would Veselago Have Asked if ... 42
  - 1.12.6 On "Magic" Structures 43
- References 44

## 2 On Cloaks and Reactive Radomes

47

- 2.1 Cloaks 47
  - 2.1.1 Concept 47
  - 2.1.2 Prior Art 47
  - 2.1.3 Alternative Explanation 48
  - 2.1.4 Alternative Design 50
  - 2.1.5 What Can You Really Expect from a Cloak? 50
- 2.2 Reactive Radomes 51
  - 2.2.1 Infinite Planar Array with and Without Reactive Radome 51
  - 2.2.2 Line Arrays and Single Elements 54
- 2.3 Common Misconceptions 55
  - 2.3.1 Misinterpretation of Calculated Results 55

2.3.2	Ultimately: What Power Can You Expect from a Short Dipole Encapsulated in a Small Spherical Radome?	56
2.4	Concluding Remarks	57
	References	58
<b>3</b>	<b>Absorbers with Windows</b>	<b>61</b>
3.1	Introduction	61
3.2	Statement of the Problem	61
3.3	Concept	62
3.4	Conceptual Designs	63
3.5	Extension to Arbitrary Polarization	66
3.6	The High-Frequency Band	66
3.7	Complete Conceptual Absorber Design	67
3.8	Practical Designs	69
3.9	Other Applications of Traps: Multiband Arrays	69
	Reference	70
<b>4</b>	<b>On Designing Absorbers for an Oblique Angle of Incidence</b>	<b>71</b>
4.1	Lagarkov's and Classical Designs	71
4.2	Salisbury Screen	74
4.3	Scan Compensation	76
4.4	Frequency Compensation	77
4.5	Circuit Analog Absorbers	80
4.6	Other Designs: Comparison and Discussion	85
4.7	Conclusions	89
	References	91
<b>5</b>	<b>The Titan Antenna: An Alternative to Magnetic Ground Planes</b>	<b>93</b>
5.1	Introduction	93
5.2	Layout of the Antenna	94
5.3	On Double-Band Matching in General	96
5.4	Matching the Sleeve Elements	97
5.5	Further Matching: The Main Distribution Network	101
5.6	The Balun	103
5.7	The Radiation Pattern	104
5.8	Something that Sounds Too Good To Be True Usually Is	106

5.9	Efficiency Measurements	108
5.10	A Common Misconception	108
5.11	We Put the Magnetic Ground Plane to Rest	109
5.12	Conclusions	112
	References	113
<b>6</b>	<b>Summary and Concluding Remarks</b>	<b>115</b>
6.1	Background	115
6.2	The Features of Veselago's Material	116
6.3	What Can a Periodic Structure Actually Simulate?	117
6.4	Did Veselago Choose the Wrong Branch Cut?	118
6.5	Could We Ever Have a Negative Index of Refraction?	118
6.6	Could Veselago Have Avoided the Wrong Solution?	120
6.7	So What Came Out of It?	121
6.8	Is Publishing the Ultimate Goal in Scientific Research?	122
6.9	What Excites a Scientist?	122
6.10	How Far Have We Gone in Our Self-Deception?	124
6.11	But Didn't Anyone Suspect Anything?	124
6.12	How Realistic Are Small Arrays?	125
	References	126
<b>Appendix A</b>	<b>The Paper Rejected in 2003</b>	<b>129</b>
A.1	Comments Written in 2007 Concerning My Rejected Paper Submitted in 2003	129
A.2	The Paper Rejected in 2003	131
<b>Appendix B</b>	<b>Cavity-Type Broadband Antenna with a Steerable Cardioid Pattern</b>	<b>149</b>
B.1	Introduction	149
B.2	Design 1	149
B.3	Design 2	151
B.4	Development of Design 2b	154
B.4.1	Push-Push Traps	157
B.4.2	Actual Layout	158
B.4.3	Phase Reversal in the Balun	160
B.4.4	Final Execution of Design 2b	162
B.4.5	Radiation Pattern	162
B.4.6	Impedance	165

B.5	Conclusions	165
	References	166

**Appendix C How to Measure the Characteristic Impedance  
and Attenuation of a Cable 167**

C.1	Background	167
C.2	Input Connector Effect	170
C.3	Do the Formulas Hold in the Smith Charts?	171
C.4	How to Measure the Cable Loss	171
	Reference	173

**Appendix D Can Negative Refraction Be Observed Using  
a Wedge of Lossy Material? 175**

D.1	Introduction	175
D.2	Refraction for Planar Slabs	175
D.3	Wedge-Shaped Dielectric	179
D.4	Asymmetric Aperture Distributions in General	181
D.5	Conclusions	181
	References	184
